

Third-Party Lab Tested Roof Rejuvenation

Independent PRI Asphalt Technologies testing showed treated shingles retained more granules, improved cold-weather flexibility, and remained active in the shingle after 1,500 hours of accelerated aging.

What the study measured

Roof Rejuvenate USA, in collaboration with Sika, commissioned an independent third-party study through PRI Asphalt Technologies. The test used 15-year-old asphalt shingles from a real residential roof and compared untreated shingles against shingles treated with Roof Rejuvenate after a 1,500-hour accelerated weathering test, simulating approximately five years of natural aging.

PRI evaluated key shingle performance indicators including granule adhesion, pliability, tear strength, and visual restoration. The treated shingles showed meaningful performance improvements over the simulated five-year period.

Key results homeowners can understand

PROPERTY	UNTREATED	TREATED	IMPROVEMENT
Granule Adhesion - Loss (g)	1.43	0.67	53% less granule loss
Tear Strength	7.6 N	9.4 N	Stronger shingle
Pliability	15-C	5-C	66.7% improved cold-weather flexibility
Color Change	-	7.02	Visibly refreshed appearance

*Data sourced from 2025 laboratory testing conducted by PRI Asphalt Technologies using 1,500-hour accelerated aging equivalent to approximately five years of natural aging.

What Roof Rejuvenate does

Roof Rejuvenate is a bio-based asphalt shingle rejuvenator designed to work inside the shingle - not sit on top like a coating or sealant. It helps restore lost oils, improve flexibility, support granule adhesion, and extend the useful life of qualified asphalt roofs.

Inside the shingle

Aging asphalt shingles dry out and become brittle over time. Roof Rejuvenate is engineered to penetrate into the asphalt base and reintroduce oils where deterioration starts.

Not a coating or sealant

This is not a paint, roof coating, or temporary surface shine. It is a true rejuvenation treatment designed to improve the condition of the existing shingle from within.

Why homeowners choose it

For roofs that still qualify, rejuvenation can help delay costly replacement, reduce premature tear-off waste, and give homeowners a smarter maintenance option backed by lab data and field results.

Third-party lab tested. Field proven. Dealer trusted. Ask your local Roof Rejuvenate USA dealer whether your roof qualifies.
